

Para-Paramedical Program

Specialization	Dental Laboratories
Course Number	21112111
Course Title	Oral Pathology
Credit Hours	(2)
Theoretical Hours	(2)
Practical Hours	(0)

❖ تطبق هذه الخطة الدراسية اعتباراً من بداية العام الجامعي 2009/2008

تأسست عام 1997

Brief Course Description:

This course introduces the students to the pathologic basis of systemic and oral disease. Putting emphasis on the definition, epidemiology, distribution, morphology, symptoms, etiology, treatment, and prognosis of each disease.

Course Objectives:

1

Upon the completion of the course, the student will be able to:

1. Learn basic principles of pathology as well as specific disease processes.
2. Know the idea of systemic diseases
3. Relate systemic diseases to the oral cavity
4. Know brief about treatment of each disease

❖ تطبق هذه الخطة الدراسية اعتباراً من بداية العام الجامعي 2009/2008

Detailed Course Description:

Unit Number	Unit Name	Unit Content	Time Needed
1.	Disorders of development of the teeth and related tissues	<ul style="list-style-type: none"> ▪ Abnormalities in the number of teeth ○ Hypodontia. ○ Anodontia ○ Hyperdontia. ○ Hypodontia or Anodontia associated with systemic defects ▪ Abnormalities of tooth eruption ○ Delayed eruption associated with skeletal disorders ○ Changes affecting impacted teeth (buried teeth) ▪ Defects of tooth structure ○ The deciduous teeth ○ The permanent teeth ○ Amelogenesis imperfect ○ Dentinogenesis imperfect ○ Tetracycline pigmentation ○ Dental fluorosis ▪ Abnormalities in tooth size ○ Microdontia ○ Macrodontia ▪ Lip & Palate ○ Cleft lip ○ Cleft Palate 	
2.	Dental Caries	<ul style="list-style-type: none"> ▪ Aetiology of Dental caries ○ Types of bacteria important in dental caries ○ The role of streptococcus mutants in dental caries ○ Role of bacterial poly saccharides ○ Other types of bacteria in dental caries ▪ Dental Plaque: ○ Stages of formation of bacterial plaque ○ Formation & role of plaque 	

		<ul style="list-style-type: none"> polysaccharides o Other ... o Susceptibility of caries o Vitamin (D) deficiency & hypocalcification o Caries of Enamel o Caries of Dentine o Caries of Deciduous teeth 	
3.	Pulp diseases& periapical lesions	<ul style="list-style-type: none"> ■ Pulp diseases o Hyperemia o Acute pulpitis o Chronic pulpitis o Pulp Polyp o Pulp Necrosis ■ Periapical Lesions o Acute periapical abscess o Chronic periapical abscess o Periapical granuloma o Periapical cysts o Osteomyelitis 	
4.	Blood diseases	<ul style="list-style-type: none"> ■ Diseases affect red blood cells o Anemia o Signs of anemia o Types of Anemia o Polycythemia ■ Disease effect white blood cells Lesions o Leukemia o Granulocytosis ■ Disease effect platelets o Thrombocytosis o Thrombocytopenia o Bleeding o Causes of bleeding o Local Causes o Functional abnormalities and disorders of clotting factors o Causes related to platelets o Some systemic disease 	

5.	Vitamins	<ul style="list-style-type: none"> ▪ Heart & Blood Vessels diseases ▪ Sources of each Vitamin ▪ Oral appearance for each vitamin deficiency ▪ Vitamin dissolved in oil <ul style="list-style-type: none"> ○ Vit. A ○ Vit. D ○ Vit. E ○ Vit. K ▪ Vit. Dissolved in water <ul style="list-style-type: none"> ○ Vit. B ○ Vit. C 	
6.	Oral lesions	<ul style="list-style-type: none"> ▪ Ectodermal Lesions ▪ Ameloblastoma ▪ Mesodermal lesions ▪ Mixed lesions ○ Ameloplasic Fibroma ○ Ameloplasic Odontoma ▪ Connective tissues tumors ○ Fibroma ○ Osteoma ▪ Malignant tumors ○ Squamous cell carcinoma 	
7.	Dental Cysts	<ul style="list-style-type: none"> ▪ Epithelial Cysts ▪ Developmental cysts ▪ Cysts non odontogenic origin ▪ Periapical cysts ▪ Radicular cysts 	
8.	Salivary Glands	<ul style="list-style-type: none"> ▪ Parotid gland ▪ Submandibular gland ▪ Sublingual gland <ul style="list-style-type: none"> • Anatomical features • Diseases: -Mucocele <ul style="list-style-type: none"> - Ranula - Sialoasis - Xerostomia - Sialorrhea - Sialadinitis - Mumps - Parotitis 	

Evaluation Strategies:

Exams		Percentage	Date
Participation		10%	--/--/----
Daily Exams		40%	--/--/----
Final Exam		50%	--/--/----

Teaching Methodology:

1. Lectures.
2. Slides and posters.
3. Dolls Models
4. Practice inside labs
5. Training visits

Course Title	Oral Anatomy
Credit Hours	(3)
Theoretical Hours	(3)
Practical Hours	(0)

❖ تطبق هذه الخطة الدراسية اعتباراً من بداية العام الجامعي 2009/2008

تأسست عام 1997

Brief Course Description:

This course integrates gross anatomy and regional; hence, its purpose is to Provide the student with the gross anatomical structures of the human oral cavity in an effort to provide the him with ideas of anatomical relations essential for functional application. The construction of the course is built in away to be thought though lectures, laboratory dissections, clinical correlations, radiographic anatomy, computerized tutorials and movies, as well as anatomical models.

Course Objectives:

Upon the completion of the course, the student will be able to:

1. Know the anatomy of the oral cavity mucosa, muscles, bone and teeth.
2. To know how to differentiate between permanent and deciduous teeth.
3. Study occlusion.
4. Analyse mandibular movements

❖ تطبق هذه الخطة الدراسية اعتباراً من بداية العام الجامعي 2009/2008

تأسست عام 1997

Brief Course Description:

This course involves a detailed study of the anatomy of the teeth, individually and collectively. Information about the anatomical and embryonic differences between individual teeth, developmental disturbances involving the teeth, root structure anomalies, the physiology of mandibular movement, and an introduction to occlusion are integral parts of the course.

Course Objectives:

Upon the completion of the course, the student will be able to:

1. Gain laboratory exposure to the individual teeth through wax carvings of the entire tooth.
2. Know how to differentiate between primary and permanent teeth.
3. Know how to differentiate between permanent teeth after collecting a group of extracted human teeth.
4. Carve teeth in wax.

Detailed Course Description:

Unit Number	Unit Name	Unit Content	Time Needed
1.	description of Permanent & deciduous dentition (teeth) and their position in the arch	<ul style="list-style-type: none"> ▪ Description of Permanent & deciduous dentition (teeth) form and their position in the upper and lower arch using plastic models ▪ Description of all teeth surfaces on the models ▪ Be aware of extracted deciduous dentition (teeth) ▪ Be aware of extracted Permanent dentition (teeth) ▪ Schematic drawing of all different teeth surfaces on a millimeter graduated paper. 	
2.	Carving of teeth on a soap model	<ul style="list-style-type: none"> ▪ Carving of teeth on a soap model to be larger than normal teeth ▪ Carving of upper and lower central incisor teeth ▪ Carving upper and lower lateral incisor teeth ▪ Carving upper and lower premolars ▪ Carving upper and lower canines ▪ Carving upper and lower 1st molars ▪ Carving upper and lower 2nd molars 	
3.	Carving of teeth on a red wax	<ul style="list-style-type: none"> ▪ Carving of teeth on a by using red wax to be larger than normal teeth ▪ Carving of teeth by using pouring wax to be in normal size ▪ training on pouring wax teeth then making acrylic teeth ▪ cutting parts from natural teeth and rebuilt by wax and recarving them ▪ remove some teeth from the model and rebuilt by pouring wax 	
4.	Making a longitudinal and cross - sectional sections of	<ul style="list-style-type: none"> ▪ Making a longitudinal mesial and distal sections of some teeth

Brief Course Description:

This course is designed to provide the student with an applied and manageable knowledge of the fundamentals nature and behavior of dental materials. Moreover, the course includes the composition, properties, application, and manipulation of metal ceramic and polymeric dental materials.

Course Objectives:

Upon the completion of the course, the student will be able to:

- 1- Provides fundamental framework for understanding the capabilities and limitations of dental materials.
- 2- Provide background for all treatments that require the use of dental materials.
- 3- Realize that the success or failure of many forms of dental treatment depends upon the correct selection of materials possessing adequate properties, as well as careful manipulation of these materials.

Detailed Course Description:

Unit Number	Unit Name	Unit Content	Time Needed
1.	Properties of dental materials	<ul style="list-style-type: none">▪ Effect of materials on the environment.▪ Effect of the environment on materials.▪ Chemical, Mechanical & physical properties.▪ Requirements.▪ Definition of mechanical properties like:<ul style="list-style-type: none">○ Stress.○ Strain.○ Modulus of elasticity.○ Tensile strength.○ Compressive strength.○ Resilience.○ Toughness.	

		<ul style="list-style-type: none"> ○ Shear strength. ○ Viscosity. ○ Adhesion, Cohesion. ○ Coefficient of thermal expansion. ○ Corrosion. ○ Tarnish. ○ Setting, working time. ○ Shelf life. 	
2.	Model & die materials	<ul style="list-style-type: none"> ■ Summary of model & die materials. ■ Gypsum products. ■ Chemical, physical properties of gypsum. ■ Types of gypsum & production. ■ Mechanism of setting reaction. ■ Setting time. ■ Effect of temperature, humidity. ■ Manipulation of use. 	
3.	Investment materials	<ul style="list-style-type: none"> ■ Summary of investment materials. ■ Requirement for investment materials. ■ Types of investment materials. ■ Gypsum – bonded investments. ○ Constituents, manipulation. ○ Properties. ■ Phosphate – bonded investments. ○ Composition, setting. ○ Manipulation. ○ Properties. ■ Silica – bonded investments. ○ Setting reaction. ○ Properties. 	
4.	Waxes & Baseplate materials	<ul style="list-style-type: none"> ■ Components. ■ Physical properties. ■ Thermal expansion & Contraction. ■ Internal Stresses. ■ Melting range. ■ Summary of wax's types & their uses: ○ Modeling wax. 	

		<ul style="list-style-type: none">○ Casting wax.○ Inlay wax.○ Sticky wax.○ Utility wax.○ Base plate wax.○ Boxing wax.	
5.	Impression materials	<ul style="list-style-type: none">▪ Requirement of impression material.▪ Classification of impression materials.<ul style="list-style-type: none">▪ Rigid materials.▪ Elastic Materials.▪ Impression Trays.▪ Plaster of Paris.○ Composition, chemistry.○ Manipulation.○ Properties.<ul style="list-style-type: none">▪ Impression composition (compound)○ Constituents & applications.○ Manipulation.○ Properties.<ul style="list-style-type: none">▪ Zinc-Oxide-eugenol○ Composition, chemistry○ Manipulation○ Properties.○ Application.<ul style="list-style-type: none">▪ Wax rim margin composition & properties▪ Alginates.○ Composition, setting.○ Manipulation.○ Properties.○ Applications.<ul style="list-style-type: none">▪ Agar-Agar○ Composition.○ Manipulation.○ Properties.▪ Composition, setting & properties for:▪ Silicones.	

6.	Polymers	<ul style="list-style-type: none"> ▪ Polysulphides. ▪ Chemical properties of polymers. ▪ Preparation of polymer. ▪ Denture base materials ▪ Acrylic resin base. ▪ Requirements of acrylic resin. ▪ Component, mixing & types. ▪ Repair materials. ▪ Relining materials. ▪ Classification or types relining materials. ○ Composition. ○ Properties. ▪ Acrylic teeth. ▪ Acrylic used in crowns & Bridges. ▪ 	
7.	Alloys, inlays, & Crownbridge	<ul style="list-style-type: none"> ▪ Requirements. ▪ Composition. ▪ Application. ▪ Gold alleys with at test 75% noble metals. ○ Classification, Composition. ○ Dental uses. ○ Heat treatment. ○ Mechanical properties. ▪ Medium & low gold alloys. ▪ Silver palladium alloys. ▪ nickel – chromium alloys. 	
8.	Porcelain in Dentistry	<ul style="list-style-type: none"> ▪ Summary of Dental porcelain. ▪ Application of porcelain. ▪ Classification, Composition. ▪ Manipulation. ▪ Thermal, mechanical & chemical properties. ▪ New porcelain Properties. ▪ Castable glass – Ceramics. 	
9.	Partial denture casting alloys	<ul style="list-style-type: none"> ▪ Cobalt - Chromium. ○ Composition. ○ Effect of constituents. ○ Manipulation.

تأسست عام 1997

Brief Course Description:

This course deals with material fundamentals, based upon metallurgy, ceramics, polymer science and surface interactions are presented as background for specific product discussions. Emphasis is put upon laboratory processes, such as precious and non-precious metal fabrication, porcelain manipulation, denture base polymer curing, and the proper handling of gypsum products.

Course Objectives:

Upon the completion of the course, the student will be able to:

1. Provide experience in materials handling and manipulation and do not emphasize technique.
2. Know how to deal with different materials used in lab and clinic.
3. Know properties of all materials used in the lab and clinic for benefit of the patient and doctor.

Brief Course Description:

This course is designed to provide the student with a basic technique of for rehabilitating the partially edentulous patient. This technique will introduce the students to knowledge and skills, built on the concepts and principles of partial denture construction which will develop the necessary skills in the laboratory to prepare the student to deal with edentulous patient in the clinic.

Course Objectives:

Upon the completion of the course, the student will be able to:

1. Know the theoretical background of complete denture construction
2. Know the practical steps and background of partial denture construction
3. Demonstrate the various material, equipment and instrument used in denture construction.
4. Give idea about all types of partial dentures (acrylic, chrome-cobalt)
5. Realize the different materials used in partial denture construction

Brief Course Description:

This course is designed to provide the students with a basic technique for rehabilitating the partially edentulous patient. It introduces the students to the practical background of partial denture construction. The skills gained will help him Manage using and dealing with chrome-cobalt materials. Moreover, the course deals with techniques to help the students in gaining skill, about the prosthesis to be used in dental lab.

Course Objectives:

Upon the completion of the course, the student will be able to:

- 1- Gain the practical background of partial denture construction.
- 2- Know the practical steps and background partial denture construction.
- 3- Demonstrate the various material, equipment and instrument used in denture construction.
- 4- Manage using and dealing with chrome-cobalt materials.

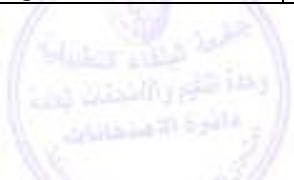

Detailed Course Description:

Unit Number	Unit Name	Unit Content	Time Needed
1.	Introduction to partial denture lab	<ul style="list-style-type: none"> ▪ Plaster lab. ○ Plaster of Paris. ○ Plaster of pair. ○ Stone. ○ Hard stone ○ Articulator. ○ Plaster knife, ○ Rubble bowl and spatula ○ Trimmer ○ Vibrator ○ Flask ○ Hammer-saw ▪ Wax lab. ○ types of wax. ○ Meter frame wax. ○ Wax Knife. ○ Wax carver. ○ Den son burner. ○ Casting lab. ○ Casting machine. ○ Wax oven. ○ Hooting even. ○ Polishing machine. ○ Finishing Machine. 	
2.	Handling and pouring the imp	<ul style="list-style-type: none"> ▪ Handling and pouring the imp . ▪ Fabricating the base. ▪ Celebrating the imp from the model. ▪ Trimming ▪ Duplication of Models 	
3.	Primary impression and study model	<ul style="list-style-type: none"> ▪ Choosing the proper tray. ▪ Mixing and loading the immaterial. ▪ Boxing the imp. ▪ Mixing the plaster. ▪ Celebrating the imp from the model and fabricating the base. 	

		<ul style="list-style-type: none"> ▪ Trimming ▪ Surveying and special tray fabricator 	
4.	Final impression and surveying the master model	<ul style="list-style-type: none"> ▪ Boxing the imp. ▪ Pouring the imp and fabricating the base. ▪ Celebration the imp for the riddle. ▪ Trimming ▪ relief 	
5.	Duplication of the master model.	<ul style="list-style-type: none"> ▪ Agar – Agar imp. ▪ Poring the imp using investment master. ▪ Treating the model. 	
6.	Waxing the frame work	<ul style="list-style-type: none"> ▪ Designing on the model. ▪ Waxing the frame work. ▪ Sparing. 	
7.	Using investment material and costing	<ul style="list-style-type: none"> ▪ Using investment ▪ Casting. ▪ Using Sandy blast. ▪ Finishing and polishing. 	
8.		<ul style="list-style-type: none"> ▪ Making rims. ▪ Transferring the central relation to articulator. ▪ Loading the model on articulator. 	
9.	Arrangement Of Teeth, Waxing and finishing	<ul style="list-style-type: none"> ▪ Choosing and arranging the teeth. ▪ Waxing. ▪ Flasking. ▪ Boiling the wax ▪ Mixing and application of acryl. ▪ Pressuring the flask. ▪ Curing the acryl. ▪ Finishing and polishing. 	
10.	Relining and Repairing	<ul style="list-style-type: none"> ▪ Relining procedure. ▪ Repairing Procedure. 	
11.	Attachment and stress breakers	<ul style="list-style-type: none"> ▪ Making attachments. ▪ Making and using stress breakers.

Brief Course Description:

This course is designed to acknowledge the students With the fundamentals of tooth preparation for extra coronal single-crown restorations and fixed partial denture abutments. Also, it is putting emphasis on the principles of fixed appliance design and fabrication are covered. In addition, it concentrates on the treatment and restorations as they are related to the periodontium.

Course Objectives:

Upon the completion of the course, the student will be able to:

1. Know the theoretical background of Fixed prosthodontics construction
2. Know the theoretical steps and background of fixed prosthodontics construction
3. Demonstrate the various materials, equipment and instrument used in fixed prosthodontics construction.
4. Have a knowledge on occlusion

Detailed Course Description:

Unit Number	Unit Name	Unit Content	Time Needed
1.	Introduction To Fixed Prosthodontics	<ul style="list-style-type: none"> ▪ Definitions ○ Fixed restoration ○ Abutment ○ Pontic ○ Retainer ○ Unit ○ Crown ○ Bridge ▪ Ways of replacing missing teeth ▪ Indications of bridges ▪ Indications of crowns ▪ Disadvantages of not restoring missed teeth ▪ Bridges contraindications 	
2.	Fixed Bridges	<ul style="list-style-type: none"> ▪ Training on making all steps of complete denture in the lab ▪ Types of bridges ▪ Classification of bridges according to position and material used ▪ General idea about fixed bridge ▪ Fixed-removable bridges ▪ Compound bridge ▪ Spring bridge ▪ Cantilever bridge 	
3.	Retainers	<ul style="list-style-type: none"> ▪ Requirements ▪ Factors that affecting required retention ▪ Types of retainers ▪ PJC ▪ metal crown ▪ 3/4 metal crown ▪ Inlays/onlays ▪ telescopic crown ▪ bonded crowns ▪ Idea about tooth preparation according to the above crowns 	
4.	Finishing Lines	<ul style="list-style-type: none"> ▪ Definitions

Brief Course Description:

This course is arranged in away to make it easy for the student to gain clinical and laboratory experiences in the discipline of fixed prosthodontics. The students will gain knowledge and skills in the preclinical situations during the course study through their practice in the lab .

Course Objectives:

Upon the completion of the course, the student will be able to:

1. Construct fixed restorations for patients requiring single crowns and fixed partial dentures.
2. Facilitate the construction of removable partial denture abutment crowns.
3. Know all steps of construction.
4. Know all materials used for construction.

Brief Course Description:

This course is designed to provide the student with practical skills needed for rehabilitating the completely edentulous patient. This knowledge and skills will be gained through the practical work in the dental labs and clinics based on the theoretical part.

Course Objectives:

Upon the completion of the course, the student will be able to:

1. Know the theoretical background of complete denture construction
2. Know the practical steps and background of complete denture construction
3. Demonstrate the various material, equipment and instrument used in denture construction

Detailed Course Description:

Unit Number	Unit Name	Unit Content	Time Needed
1.	complete denture lab with related materials, equipment, instruments and branches	<ul style="list-style-type: none">■ Plaster lab.○ Plaster of Paris.○ Stone.○ Hard stone○ Articulators.○ Plaster knife,○ Rubber bowl and Manuel mixing instrument spatula.○ Trimmer.○ Vibrator.○ Flasks.○ Flask Press hydrolyte○ Hammer-saw■ Wax lab.○ Types of wax.○ separating material○ Wax carver.○ Boiler.○ Scissors.○ Benson burner.■ Finishing lab○ Polishing and finishing instruments.○ Straight hand piece.○ Polishing machine.○ Various brushes.	
2.	Pouring the impression	<ul style="list-style-type: none">■ Handling and dealing with impression.■ Pouring the impression.■ Fabricating the base.■ Separating the impression from the model.■ Model Trimming■ Duplication of Models	
3.	Taking primary impression	<ul style="list-style-type: none">■ Choosing tray and impression material.	

		<ul style="list-style-type: none"> ▪ Mixing of impression material and loading on tray. ▪ Boxing the impression. ▪ Pouring the impression, to fabricating the base. ▪ Separating the impression from the model and trimming. ▪ Fabricating of Special tray by using cold acryl and shellac. 	
4.	Taking final impression And making occlusal rims	<ul style="list-style-type: none"> ▪ Choosing final impression Material. ▪ Dealing with final impression ▪ Boxing the impression. ▪ Pouring the impression and making the master model ▪ Making different types of denture bases ▪ Making occlusal rims 	
5.	Arrangement and waxing of the teeth after the registering of centric relation in clinic.	<ul style="list-style-type: none"> ▪ Types of articulators. ▪ Choosing the proper articulator ▪ Loading model on articulators ▪ Introduction to face-bow ▪ Choosing the suitable teeth. ▪ Arrangement of anterior upper and lower teeth. ▪ Arrangement of posterior or upper and lower teeth. ▪ Waxing and making post dam. 	
6.	Preparing of the complete denture after try – in clinic	<ul style="list-style-type: none"> ▪ Finial Waxing. ▪ Choosing the flask and loading the model in. ▪ Plaster Mixing and making the first lager. ▪ Making 2nd and 3rd layer in flask. ▪ Boiling the flask and removing the wax. ▪ Opening the flask and cleaning the residual wax. ▪ Mixing of hot acryl. ▪ Pressing the flask. ▪ Opening the flask and using of foil. ▪ Re - pressing the flask. 	

		<ul style="list-style-type: none"> ▪ Acryl polymerization. ▪ Removing the denture polishing and finishing. ▪ Reloading of the denture on articulator and making occlusal balance. 	
7.	Repairing relining and rebasing	<ul style="list-style-type: none"> ▪ Repairing of dentures and adding teeth. ▪ Relining procedure. ▪ Rebasing procedure. 	
8.	Immediate and over dentures	<ul style="list-style-type: none"> ▪ Immediate dentures making procedures. ▪ Over dentures making procedures.

صفحة (60) من (86)

Brief Course Description:

This course is designed to provide the student a comprehensive study of theatrical and practical elements in occlusal rehabilitation and surgical appliances. Taking into consideration that the primary concern of the dental technologist is the restoration of the occlusal surfaces of teeth of opposing arches together in such a manner that they still function to preserve the health of the masticatory system. The course will deal with the dynamics of mandibular movement and its effect on tooth form, Principles of and instrumentation will be presented to enable the student to simulate mandibular movements on an articulator. Occlusal restorations will be fabricated in wax on a semi adjustable articulator, according to functional criteria.

Course Objectives:

Upon the completion of the course, the student will be able to:

1. Know how to construct occlusal and surgical appliances
2. Realize the steps of obturator construction.
3. Have an idea about materials used in the construction.
4. Know how to construct speech devices and jaw fracture devices.

Detailed Course Description:

Unit Number	Unit Name	Unit Content	Time Needed
1.	Obturators	<ul style="list-style-type: none"> ▪ Immediate obturators. ○ Requirements of immediate obturators. ○ Materials used for immediate obturators. ▪ Interim obturators. ○ Requirements of interim obturators. ○ Materials used for interim obturators. ▪ Definitive obturators. ○ Requirements of definitive obturators. ▪ Materials used for definitive obturators. 	
2.	Facial & Surgical prostheses	<ul style="list-style-type: none"> ▪ Mandibular resection devices. ○ Requirements of mandibular resection devices. ○ Materials. ▪ Edentulous mandibular resection device. ▪ Dentulous mandibular resection device. ▪ Facial prostheses. ○ Requirements of facial prostheses. ○ Materials for facial prostheses. ○ Laboratory facility requirements. 	
3.	Speech aid devices preventive devices	<ul style="list-style-type: none"> ▪ Carving of teeth on a by using red wax to be larger than normal teeth ▪ Carving of teeth by using pouring wax to be in normal size ▪ training on pouring wax teeth then making acrylic teeth ▪ cutting parts from natural teeth and rebuilt by wax and recarving them ▪ remove some teeth from the model 	

		and rebuilt by pouring wax.	
4.	Occlusion appliances	<ul style="list-style-type: none"> ▪ Occlusal appliance for treatment temporomandibular Joint. ▪ Surgical Orthodontic appliances. ○ Requirements of occlusion appliances. ○ Materials of occlusion appliances. 	
5.	Appliances Used in treatment of jaws fracture	<ul style="list-style-type: none"> ▪ Surgical appliances. ○ Requirements of Fractured appliances. ○ Mat aerials of Fractured appliances. ▪ Acrylic cast covering teeth used in fractures 	
6.	(Lab. Work) obturators construction	<ul style="list-style-type: none"> ▪ Mountain the gypsum model for maxillary arch. ▪ Cut the study cast in places need & Fracture line. ▪ Fixed study model to articulator. ▪ Waxed the vacuum obturators. ▪ Flasking of obturators ▪ Finishing & Polishing obturators. 	
7.	Occlusion appliances construction	<ul style="list-style-type: none"> ▪ Mounting gypsum model. ▪ Fixed study model to articulator. ▪ Waxing occlusion appliances. ▪ Flasking ▪ Finishing and polishing.

Brief Course Description:

This course is designed to introduce the student into emergency medical care providing him with the knowledge and skills that make him able to do patient assessment and choose first Aid priorities and the more suitable instruments which allow him to manage Airway Obstruction, shock and bleeding, soft-Tissue injuries (wounds), soft tissue Injuries (Burns) trauma and fractures, medical emergency (Allergies Reaction) and medical emergency (Poisoning) and, environmental emergency, and altered mental status, It also introduces him to the skills needed for doing CPR.

Course Objectives:

Upon the completion of the course, the student will be able to:

1. The general rules, ethics and basis of First Aid:
2. How to examine and assess the causality safely and effectively.
3. How to deal with common first Aid Emergency.
4. How to assess many varying emergency situations to determine what patient care is needed and to provide the necessary care.
5. How / CPR is done safely.

Detailed Course Description:

Time Needed	Unit name	Unit Content	Time Needed
1.	Introduction	<ul style="list-style-type: none"> ▪ Introduction to emergency medical care. ▪ Definition of first aid. ▪ Equipment and supplies. ▪ Medical, legal and ethical. 	2 lect-theory
2.	Patient assessment	<ul style="list-style-type: none"> ▪ Primary survey. ▪ Secondary survey for patient (trauma). ▪ Baseline vital signs. 	1 lect- 2hours practical
3.	The air way	<ul style="list-style-type: none"> ▪ Oxygen sources. ▪ Equipment for oxygen delivery. ▪ Masks. ▪ Airway accessories. ▪ Suction 	2 lect
4.	Shock and bleeding	<ul style="list-style-type: none"> ▪ Definition. ▪ Assessing shock. ▪ Causes, classification. ▪ Emergency care for shock. ▪ Types of bleeding. ▪ Emergency care for bleeding. ▪ Bleeding from (ears, nose, and mouth) and emergency care. 	
5.	Soft – Tissue Injuries (wounds)	<ul style="list-style-type: none"> ▪ Definition. ▪ Closed injuries. ▪ Open injuries. ▪ Emergency for soft-tissue injuries(dressing and bandages 	
6.	Soft tissue injuries (burns)	<ul style="list-style-type: none"> ▪ Definition. Classification, and Causes ▪ Severity of Burns. ▪ Emergency medical Care for Burn Patients. 	

7.	Trauma And Fractures	<ul style="list-style-type: none"> ▪ Fractures and Dislocation, Causes and Diagnosis. ▪ Emergency Care for patients with Fractures. ▪ Splinting, Principles of splinting, Equipments. ▪ Spinal cord injury Assessment Signs and Symptoms, Emergency Medical Care of the Spine – Injured Patient. 	
8.	Medical Emergency (poisoning)	<ul style="list-style-type: none"> ▪ Assessment of allergies Reactions. ▪ Cause, signs and symptoms. ▪ Emergency medial care for patients with Allergies Reaction. 	
9.	Medical Emergency (poisoning)	<ul style="list-style-type: none"> ▪ History of poisoning. ▪ Types and signs and symptoms. ▪ Use of activated charcoal. 	
10.	Environmental Emergency	<ul style="list-style-type: none"> ▪ Heat stroke, Heat Exhaustion, Heat cramps (Definition, Diagnosis, and Management). ▪ Hypothermia (Signs and Symptoms, Emergency care) ▪ Drowning. 	
11.	Altered Mental Status	<ul style="list-style-type: none"> ▪ Diabetic Emergency. ▪ Seizures. ▪ Emergency care of patients with Altered Mental status. 	
12.	Airway Obstruction	<ul style="list-style-type: none"> ▪ Choking – Heimlich Maneuver (Adults, Children) ▪ Choking. 	
13.	CPR	<ul style="list-style-type: none"> ▪ CPR (Adults, Children) ▪ CPR (Infants) 	
14.	First Aid priorities	<ul style="list-style-type: none"> ▪ Case classification & triage

Brief Course Description:

This course is designed to provide students with knowledge of how to construct basic orthodontic appliances. Orthodontic appliances are fabricated with heavy emphasis on wire bending. The course should make it easy for the student to understand the orthodontic classification system, orthodontic terminology, work authorizations, and purposes of the appliances. Finally, the course exposes the student to fixed, banded, edged wise cases and surgical orthodontic cases.

Course Objectives:

Upon the completion of the course, the student will be able to:

1. Work heavily on wire bending.
2. Understanding the orthodontic classification system, orthodontic terminology, work authorizations, and purposes of the appliances.
3. Be exposed to fixed, banded, edged wise cases and surgical orthodontic cases to know the lab steps of such cases.

Detailed Course Description:

Unit Number	Unit Name	Unit Content	Time Needed
1.	Springs	<ul style="list-style-type: none"> ▪ Springs ○ Location & Spring closing (Burial, Palatal, Maxillary & Molecular Guarded & Guided springs. ○ Guarded spring, self – supporting spring. ○ Guided spring. ▪ Screws ○ Types. ○ Sizes. ○ Uses ▪ Retention of Appliances ○ General principles ▪ Adam's clasp variations. ▪ Fitted labial bow. ▪ Anchorage. ○ Definition & Principles. ○ Proper Application. ▪ Baseplate ○ Specifications of acrylic. ○ Baseplate design ○ Function of baseplate. ○ Additional Use of Atoner or posterior bite planes. 	
2.	Screws	<ul style="list-style-type: none"> ▪ Screws ○ Types ○ Sizes ○ Uses ▪ Retention of Appliances ○ General principles ▪ Adam's clasp variations. ▪ Fitted labial bow. ▪ Anchorage. ○ Definition & Principles. ○ Proper Application. 	

		<ul style="list-style-type: none"> ■ Baseplate ○ Specifications of acrylic. ○ Baseplate design ○ Function of baseplate. ○ Additional Use of Atoner or posterior bite planes. 	
3.	The materials for removable appliance construction	<ul style="list-style-type: none"> ■ Stainless steel wires. ○ Properties of stainless steel wire. ○ Diameter of wire. ○ Types & hardness grades. ■ Acrylic Resins. ○ Heat – Cured acrylic. ○ Self – Cured acrylic.. ○ Advantage, disadvantages and uses for each type 	
4.	Designs of removable or orthodontic appliances	<ul style="list-style-type: none"> ■ Tooth movement in line of the arch. ○ Mesial movement of incisors. ○ Distal movement of canines ○ Movement using palatal spring. ○ Movement using Buccal retractor. ○ Movement using movement of molars using screws. ○ Distal using spring. ■ Labia – Bucco-lingual movements of teeth ○ Labial movement of central incisor. ○ Retraction of upper incisors (Robert's Retractor). ○ Labial expansion of upper incisors (Expansion screw). ○ Buccal expansion of upper buccal segments ■ Extra – oral face bow. ■ Function appliances / The Andersen appliance ■ Passive appliance. ○ Space maintainers. ○ Hawley Retainer 	
5.	Welding & Soldering for	<ul style="list-style-type: none"> ■ General principles. 	

	orthodontic appliance construction	<ul style="list-style-type: none"> ▪ Equipment & materials ▪ Methods.

Brief Course Description:

This training course is designed to provide the student with practical skills in all phases of dental laboratory procedures. More specifically, the course is arranged in away that the student will gain field training in all areas of basic laboratory work, including fixed prosthodontics, complete dentures, as well as advanced laboratory work (Maxillofacial prosthesis, ceramics). It reinforces and extend their previous learning in all steps of all dental courses.

Course Objectives:

Upon the completion of the course, the student will be able to:

1. Learn model pouring, custom tray making, occlusion rims, mounting the articulators, all leading to setting teeth.
2. Acquire further instruction and laboratory work-in removable prosthodontics, immediate denture, and overdenture.
3. Understand further instruction and laboratory work-in maxillofacial prosthesis, and ceramics.
4. Survey different models.
5. Understand further instruction and laboratory work-in orthodontic appliances.

Detailed Course Description:

Unit Number	Unit Name	Unit Content	Time Needed
1.	Preservation and pouring of the impression	<ul style="list-style-type: none"> ▪ caring of the impression ▪ pouring ▪ separation and making casts 	
2.	Complete denture steps	<ul style="list-style-type: none"> ▪ Training on making all steps of complete denture in the lab 	
3.	Denture repair and adding fractured teeth	<ul style="list-style-type: none"> ▪ denture repair ▪ adding fractured teeth 	
4.	Rebasing and relining	<ul style="list-style-type: none"> ▪ Training on Lab work and steps of rebasing and relining 	
5.	Immediate denture and overdenture	<ul style="list-style-type: none"> ▪ Training on lab steps of immediate denture ▪ Training on lab steps of over denture 	
6.	Steps of partial denture prostheses	<ul style="list-style-type: none"> ▪ Training on making all steps of partial denture prostheses in the lab 	
7.	surveying	<ul style="list-style-type: none"> ▪ Training on steps of surveying in the lab 	
8.	Steps of fixed prostheses	<ul style="list-style-type: none"> ▪ all steps of fixed prostheses ▪ repair of fractured parts ▪ adding porcelain to fractured crown or bridge 	
9.	Steps of orthodontic appliances	<ul style="list-style-type: none"> ▪ preps ortho appliance ▪ preps acrylic night guards 	
10.		<ul style="list-style-type: none"> ▪ Steps of obturators in the lab as required by doctor. 	
11.		<ul style="list-style-type: none"> ▪ soldering ▪ adding teeth ▪ repair of fractured acrylic parts
